Course Code: CSA1706

Reg. No: 192311066

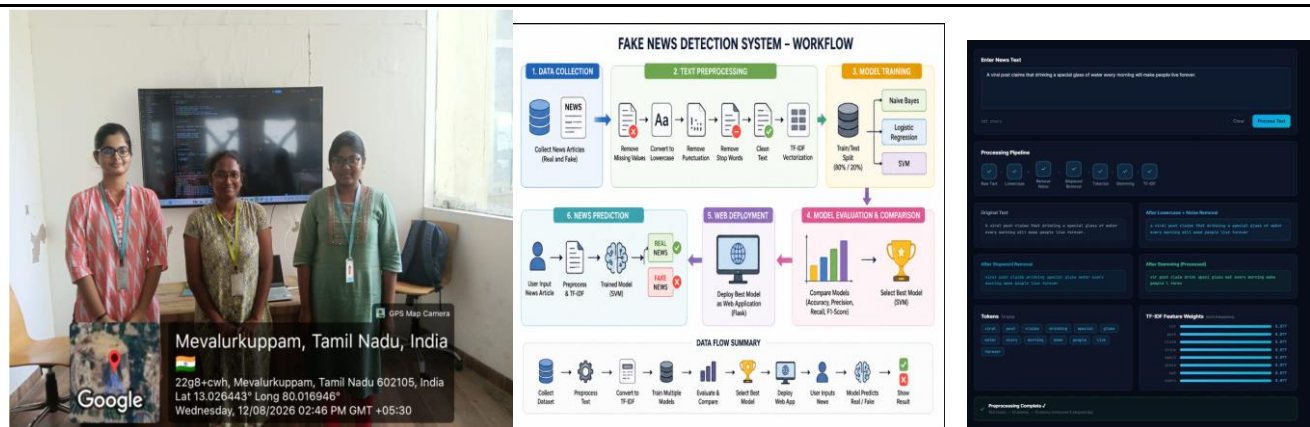

Slot: B

Course Name: Artificial intelligence

Course Faculty: Dr. Krishna Kumar Kathiresan

Project Title: Fake News Detection System

Module Photographs:

Project Description:

Fake News Detection is a machine learning-based system that identifies whether a news article is REAL or FAKE. The system preprocesses the news text, converts the text into numerical features using TF-IDF, and uses a Linear SVM classification algorithm to predict the result. The system is deployed as a web application where users can enter news content and receive the predicted result along with a confidence score.

Modules:

1. **Text Preprocessing** – Cleans and prepares the news text.
2. **NLP Model Training** – Uses TF-IDF and Linear SVM to train the classification model.
3. **Web Deployment** – Provides a web interface to enter news and display REAL/FAKE results.
